

About BorderWare™

- :: Trusted by TELUS, one of Canada's largest telecommunications companies, to **prevent** inbound threats to the organization's network and secure up to 5 million customers.
- :: Chosen by BAWAG, the largest bank in Austria, to **control** outbound content, protecting the privacy and confidentiality of personal information for its customers.
- :: Partnered with NATO to **manage** its messaging infrastructure and secure its email network from threats.
- :: **Prevent; Control; Manage.**
That is what BorderWare does. We are a global vendor of messaging security, privacy and compliance solutions that protects enterprises of all sizes – and their networks – from the risks and threats associated with Internet communications.

Product Family

- BorderWare Infinity Platform**
- MXtreme Email Security**
- SIPassure VoIP Security Gateway**
- SteelGate Firewall & VPN**
- BorderWare Security Network (BSN)**

What Sets Us Apart

First Integrated Content Security Platform – BorderWare Infinity Platform is the industry's first integrated content security platform designed to provide a single policy to protect both inbound and outbound traffic for all communications protocols including email, IM, Web, and VoIP. It protects enterprises of all sizes against a converging threat landscape with unmatched scalability and resilience.

Industry First VoIP Security – The only security company to offer a true VoIP security gateway. As VoIP continues to grow and replaces traditional phone systems, it needs to be protected from the same nature of attacks that target email and IM. BorderWare uniquely combines existing legacy product capabilities with new and innovative technology, taking security for VoIP applications to the next level.

Innovative Next Generation Reputation Services – With the convergence of threats, analyzing email-sending habits and volume is no longer sufficient to provide the proactive, real-time defense customers need to protect against all types of attacks. BorderWare Security Network (BSN) protects customers from more than email attacks. It is the first and only service to analyze the behavior of IP addresses across email, IM, web and VoIP – immediately at the perimeter with a zero false-positive rate, providing unprecedented protection for today's converged networks.

Business Continuity: Never Lose a Message & No Failure – In the event of an unpredictable criminal attack or natural disaster your infrastructure is at risk of failing, and your entire email system could be eliminated causing your organization to lose everything. BorderWare is the only security company with patent-pending message-level redundancy to ensure no message is ever lost. BorderWare's on-demand clustering technology scales to support upwards of 10 million messages per hour, removing a single point of failure to ensure a network is always up and running.

Integrated Privacy & Compliance Solution – BorderWare's end-to-end privacy and compliance solution controls outbound content and provides integrated encryption to securely deliver sensitive information. Through the enforcement of corporate and regulatory policies, organizations can ensure that policies are enforced and vital corporate data is protected from any legal liability or corporate violation.

12 Years of Total Security – BorderWare continues to build success on a 12-year history of providing superior network security and customer service. Our market leadership and expertise is validated by the quality of our products, which have never been breached, as well as our ability to address and protect the needs of the most demanding networks.

Highest Level of Certification – BorderWare was the first company to obtain the Common Criteria EAL4+ security certification for its firewall product – the highest level of third party certification for network security devices in the industry. MXtreme is the first and ONLY email security appliance in the world to obtain this certification.

Products

BorderWare's messaging security, privacy and compliance solutions – combined with professional services, customer support and strategic partnerships – help organizations to mitigate the risks associated with today's converging threat landscape.

BorderWare Infinity Platform

Single policy & single solution for email, IM, Web and VoIP. The first truly integrated content security platform for multiple communications applications – through a single common policy.

MXtreme

Award-winning email security, privacy and compliance solution. MXtreme takes a multi-layered approach to protect organizations with advanced anti-spam and anti-virus capabilities, and a threat prevention engine. It effectively controls outbound information to meet compliance requirements and protects organizations from theft and leakage of confidential information and intellectual property.

SIPassure

The first VoIP Security Gateway - a new class of product that combines the best features of an enterprise firewall, an Application Layer Gateway (ALG), and a Session Border Controller (SBC). SIPassure is designed to secure all Session Initiation Protocol (SIP) based applications including VoIP services, video conferencing and other messaging applications.

SteelGate

Based on the BorderWare Firewall Server software, SteelGate is one of the most highly certified firewalls in the world. It delivers unrivalled security and services in a tightly integrated hardware package.

BorderWare Security Network (BSN)

An innovative service – and industry first – that provides real-time behavior analysis for all business applications. BSN is the first service to analyze the behavior of IP addresses across multiple applications including email, web, IM and VoIP. Visit www.bsn.borderware.com

Strategic Partnerships

CommVault, F5 Networks, FaceTime Communications, Kaspersky Labs, Marconi, McAfee, Mitel, PostX, PGP, RSA Security, Sun Microsystems, SurfControl, Symantec, Ubiquity, Zfone

Customer Leadership

BorderWare is the benchmark provider of messaging security solutions for enterprises of all sizes and governments worldwide with over 8,000 customers across 65 countries, and 500 channel partners. Our success is reflected in our strong customer base, leadership position in the messaging security industry and our expertise in several industries.
